

“Consciousness could be the electromagnetic field constituted by the sum of these emissions. But as you know, our understanding of the neurological basis of consciousness is very limited.”

We note that Yogananda like Seth, talks about the development of the foetus requiring an organizing field for development, according to karmic design [35]. This view is supported by scientific studies which show that any living entity exhibits an electromagnetic field. In the 1970s, biologist Bruce Lipton, took part in research that revealed minute electromagnetic fields forming around embryonic forms, whether seeds or embryos within eggs, as soon as conception or germination occurred. This means, for example, that if we place two electrodes at the two ends of a chicken egg, a tiny voltage of 2.4 mV will register, indicating a current running between the two ends of the egg. The electromagnetic field around the seed, whether plant or animal, then becomes the organizing field of life. So in the case of a chicken, the embryo’s spine develops along the line of this current and the growing organism follows a pre-existing electromagnetic hologram, or morphogenetic energy field.

Actually, it was Harold Saxon Burr, a distinguished neuro-anatomist of the Yale School of Medicine, who in the 1940s pioneered the study of the organizing fields of life [36]. His research with animals and living plants revealed what he termed “L-fields” or “Life Fields”. With plant seedlings, for example, he found that the surrounding electrical field was that of the adult plant, indicating that any developing organism is destined to follow a prescribed pattern of growth generated by its individual EM field. Moreover, in relation to human behavior Burr writes:

“The behavior of living systems is a consequence of the pattern and organization provided by the L-field and abnormalities in the L-field can give advance warning of future symptoms before they are physically evident. L-fields reflect also mental and emotional states, which evoke energy in the nervous system. The L-field regulates and controls the creature whatever it may be, and its aims are wholeness, organization and continuity.”

The Akashic Record

*It is out of Akasha that every form comes,
and it is in Akasha that every form lives.
Tattvic Philosophy*

In 1986, an historic discovery was announced by a scientific team at Sydney University [37]. The discovery was of a low energy vortical or spiraling EM field that seems to be an effect of the Universal field. This field is able to transmit

Strengthening Your Energy Field *Is* Spiritual Evolution

energy patterns from one natural source to another and is the responsible agent for form, growth, development and behavioral patterns in nature (morphogenesis). Eminent biophysicist, Dr. Sergei Barsamian, has over thirty years experience in the study of polymers and bio-polymers and their dielectric nature [38]. Explaining the nature of the formative ‘morphic’ field, he says:

“The field is of low-energy; it is dynamic or active. It is a receiver and transmitter of all energy patterns existing in our physical universe. It recycles information according to a specific energy pattern existing at the physical level when the conditions are conducive. It is the responsible agent for form, growth and development in living biomatter. It is an expression of dynamic nature herself and is an attribute and expression of one formative, background field of potential energy.”

The findings were later successfully replicated by the Max Plank Institute’s Department of Biophysics in Berlin, Germany [42]. The international photo-journalist and researcher Mark Balfour from his interviews with Dr. Barsamian, describes in layman’s terms the importance and implications of this research, especially in regard to the electromagnetic cause and control of cancer [39]. Balfour writes the following:

“The nature of the formative field can in one way be imagined to exhibit the function of a magnetic video recording tape upon which is impressed the energetic patterns of all physical, moral and psychic emissions occurring throughout time. The individual pattern or blueprint for form and growth has its origin at this source and is radiated when the pattern of an embryo or seed at the physical level attracts that sympathetic vibration, and when the conditions for its manifestation are conducive – in terms of physics, when a state of ‘coherence’ or pattern recognition exists.”

Barsamian and his team conducted research with crystals, yeast cells, thymus cells and mouse cells in relation to transmissions of patterns over a distance, which led to some amazing discoveries. In his book, *The Sign of the Serpent*, Balfour cites a typical example, as follows:

“A glass slide coated in a solution of polystyrene and benzol gave the slide a polymer coating. (Polymers are macro molecules, important in living systems.) A carbon particle or ‘charge’ placed on the slide, upon examination revealed a spiral appearing on the polymer and surrounding the charge. Acting as a sensitive film emulsion, the polymer recorded a phenomenon which must involve factors outside the normal concept of space/time dimensions.”

It seems from this description that the charged carbon particle (diamond) acted as an inter-dimensional doorway! [41] (Diamond and carbon are the same

Tuning the Diamonds

Figure 8.4 A low energy spiral EM field. Historic photograph believed to be delivering information stored in the Universal Field or akashic record. Credit and Copyright © Dr. Sergei Barsamian

This photograph was taken in a Sydney University Laboratory in late 1986, marking an historic event. It shows the low-energy spiral field that surrounds a carbon particle. The particle was placed on a polymer-coated slide. Polymers are used by scientists as a substitute for human cells. They can act as sensitive film emulsions and thus record an impression of a physical event — in this case, that of a previously undetected field pattern surrounding the carbon particle. Energy is believed to flow in spirals. This photo is considered to be evidence in support of the Unified Field Theory, which Einstein amongst others, believed to be the basis of the physical universe.

element, but diamond is the high-energy crystalline form). Balfour gives us another astounding insight into the discovery of this field, see figure 8.4. Balfour writes:

“A photograph taken of the vortex field shows a speck of carbon, a charged particle in the center of the vortex. The energy frequency of the particle attracts a sympathetic or cohering frequency existing in the field. This situation creates an unfolding of the field’s potential energy towards the particle, in a spiral or vortex pattern, which is electro-magnetic in nature. The result is a stimulation of the energy of the particle or host.”

Balfour writes that the energy enters the particle, via a vacuum point in the charge, where the vortex field will not be deformed in any manner. In the ancient Indian Vedic understanding, the information stored in the universal field is identified as the ‘akashic record’ – ‘akasha’ being the Sanskrit term for ‘space’. It appears that these scientists have provided hard evidence for the role of inter-dimensional disks of light! According to Dubro, the akashic record is “downloaded” into the Universal Calibration lattice onto constructs she calls the disks of light. Here is a description:

- ❖ “Your history – your hereditary patterns, past-life records, and all the events you have experienced in this lifetime – are recorded within the long informational fibers located behind you. These records look like tiny disks of light; they hold the information in place electromagnetically.”

Strengthening Your Energy Field *Is* Spiritual Evolution

Balfour writes that the charged particle attracts the field's "potential energy" in a spiral or vortex pattern. Dubro says:

- ❖ "The light strands in front of the human energy field comprise the field of potential possibilities... The light disks contained in these long informational fibers function like transmitters, attracting "like" energy."

In Kashmir Shaivism, based on the Vedas, matter is composed of "tattvas" which are units of consciousness. The "Tattvas" are "three-dimensional geometric energy vibrations" which are "modifications of Svava, or the spiraling current" [42]. The relationship between the spherical and geometrical property of consciousness relates to the dimension in which the energy is being perceived. This is discussed again in the chapter 10, in respect to sacred geometry. Nevertheless, once again ancient knowledge is verified, in relation to the discovery of this spiraling EM field!

Many ancient teachings used the symbol of the spiraling serpent to represent "universal wisdom", this symbolism has now been scientifically validated.

The main conclusion of the Sydney research, is that biological EM field disturbances, rather than biochemical factors, are primarily the cause of disease. Thomas Bearden writes about the work of Dr. Barsamian on the dielectric behavior of biosystems and the related work of Dr. Bevan Reid on his website [43]. Lamenting the fact that this research is relatively unknown, Bearden gives the following cause: "it is difficult to find a referee who sincerely understands the related experiments and their underlying theory. This presents a nearly impenetrable barrier to publication in leading scientific journals". Regardless of the lack of recognition, these researchers have gone on to new endeavors, both related to the early detection of cancer [44]. Barsamian developed the Diagnostic Analyser (DDA) which is capable of providing early warning of cancer even before clinical or physical appearance. Reid became a co-founder of a Sydney based company, Polartechnics, that was set up to develop and commercialize a revolutionary new cervical cancer detection test.

Dr. Valerie Hunt, has also discovered the influence of the akashic records and our energy "history" that can directly impact the NOW. She explains her understanding of this influence in terms of "lifelihoods".

- ✠ "The word "lifelihoods" is not just a term I coined for the old ideas about past lives. Past lives emphasize the physical existence of a life, a time-space construct. Lifelihoods emphasize the soul itself, which is part of the field,

This is similar to the work of a Australian team of researchers Dr. B. L. Reid and Dr. S. Barsamian, and their colleagues where experimental studies could positively verify pattern and form transmission at a distance. An unexplored information field was discovered and they could demonstrate how this could effect both living cells and inert crystalline matter.
